Swedish City Skellefteå tasked ENITED with architectural evaluation

Austria | Sweden, November 2016: Once again the Austrian agency ENITED Business Events has been asked to be the sparring partner to a conference venue in the making. The “KULTURHUS SKELLEFTEÅ”, a flagship project in the northern Part of Sweden, designed by the famous White Architects, will be ready to inaugurate in 2019. ENITED is sharing its international expertise with leading conference venues to create the ideal framework for this exemplary project.

The new center is a multi-functional venue, in the City of Skellefteå in the northern part of Sweden, which contains a new library, two art galleries, a theatre, a guest stage, a hotel with about 200 hundred rooms, a spa, a restaurant, banquet facilities AND conference/congress facilities for meetings up to about 1,000 persons. “At an early stage, we decided to connect expertise regarding meetings to the project in order to ensure the venue’s meeting capacity. Already in the architectural competition, which determined the design of the venue, a jury member was appointed specifically from a meeting perspective. In the further development process, we have chosen ENITED to review the architectural plans. We have great confidence in their expertise, given their past experiences and attention for details”, says Therese Bäckström Zidohli, project manager at Skellefteå Municipality.

ENITED has gathered its team of excellence to contribute with their knowledge and experience by reviewing the drawings and look for development opportunities for the meeting parts, and of course suggest good solutions. It includes everything from entrances, people flow, cloak rooms, mobile catering stations, handling of goods, validation of meeting facilities, security etc. Henrik von Arnold, Senior Consultant at ENITED, says “Because of the multi-functional purpose of the venue, this project is definitely one of the most exciting ones so far. We are very happy to assist the city of Skellefteå in realizing this unique flagship project”.
